Great game AND the devs have an actual backbone to not take Epic exclusivity money. Definitely worth the money.. This game should be called Vengeance of the Vagabond.. Adds atmosphere to driving the bus. For me personally a welcome addition as I don't play with my PC online.. Danger Deck is a DLC for the Fractured but Whole which adds three main new elements to the game:

1) The titular Danger Deck, which is basically a challenge mode where you must face enemies and bosses from the main game in a "virtual environment" of sort in increasingly hard encounters very different from your usual fights in free roaming. Overcoming said challenges will award you unique costumes and Artifacts.

2) A "harder than hard" new difficulty setting for the main game, Diabolical.

3) New sets of costumes based on the outfits normally worn by the main kids in the series proper.

You should really get this DLC if you are interested in the extra challenge the Diabolical mode provides and\/or a fairly challenging fight trials mode. A solid little puzzle game with some rather nice 2.5d eye-candy, this one's not especially lengthy so maybe catch it in a sale if you begrudge paying roughly £2 an hour for your entertainment. Well worth the small sum I paid for it, if only for the atmospheric design, which helped give some depth to what is a fairly simple puzzler at it's core.. The best management system in the world, I can't belive no other game developer company adopted this system.
The feeling how you deplete the towns of civilians to make soldier from them is outstanding even to this day!
Should be in Total War games!. I initially got this game as a cheap substitute for Factorio which I also want to play. However I have grown to liking the challenge of making a production line work within the confines of set factory floorplans. Graphics are simple but nice and practical.
Conveyer belts everywhere!!!!. Pros:
- Visuals and atmosphere are great
- AI seems pretty adaptive
- Weapons feel powerful
- Coop gameplay is good!

Cons:
- Solo play is not as good as coop :(
- Few bugs

Overall a promising start :). for 60 cents this game is still a piece of crap. But it got some cheap laughs out of me.

Changing my review to negative because they are now calling this a demo instead of an early buy in.
Demo's are supposed to be free.. A mixture of rhythm, bullet hell and quirky characters. I can definitely recommend it for the low price and a fun experience.. I found this game and i think its pretty fun... Untill i try to buy the 2nd shop, And then it stops and i have to quit. I cant tell if its just me or if its just a glich that your working out, But if you fix this, I'll re-edit this review... If you have this glich too, tell me, It would be nice to know. Unplayable--starts in wrong resolution can't click. Week ago i play that game and its was all oke after week some error come about java ruintime anybody can help ? i love that 2 much i want to play. This point & click is filled to the brim with puzzles, interesting, beautiful and memorable areas, a main character with charm, and plenty of moments you'll never forget. I've beaten the CD version upwards of 4 times and it never gets dull. In fact, I'm bought it on steam just so that I can beat it again and again. A hidden gem, and dare I say a hidden masterpiece of the gaming world.. This -could- be so much fun without the pointless delays and with some options.

As it is, no way to turn the music off, which means I have to mute it in windoze Volume Mixer, and in turn I only have the chopped up subtitles for the dialogue, hard to follow when you only get one line of it at a time, sentences broken up at nonsensical points (when I'm not forced to un-mute it because some riddle demands to listen to some person rambling on).

There's no way to skip the dialogue, clicking actually REPEATS it. Would it be so much to ask to give me the info in a journal and let me skip those ugly animated figures?

I really can't stand it when games let me wait instead of letting me PLAY the freaking game. Animations in the background are ok when they don't hold me up. Anything I have to watch through before I can actually do something is bad. If I want to just watch, I turn on the TV.

Which is actually recommended with this game. Find something else to do while the game slogs through those endless pointless delays. Not just the dialogue, but also before and after actual riddles. Imminent riddle? Oh, great. Let's wait before you can click to start it. You solved it? Oh, let's wait before you get told whether it's correct. You're done with the riddle? Let's wait before you get back to the game. Bah.

The actual puzzles are nice, but I guess without the forced lengthening of game time by all the delays, the game itself would be quite short. There isn't an overwhelming number of puzzles\/riddles. Not that any amount of interesting puzzles would make up for that, as every single one just adds waiting time.

But if I didn't have to sit through all those delays and just get to freaking play the damn game, I'd actually recommend it. Better short than wasting time with being held up.

This game is only for people who like watching while not getting to do anything.

Oh, and to get it to run in a window I had to find some config file of the game on c: and edit that.
